The Problem: To determine if:

“Kesslers team conducted 60,643 face-to-face interviews with adults in 14 countries” →

“Kesslers team interviewed more than 60,000 adults in 14 countries”

we need

- the equivalence between “X conducted Y interviews with Z” and “X interviewed Y Z”

- the implication rule that says “X” → “more than Y” if “X is bigger than Y”
Combining Semi-Unsupervised Acquisition of Corpora and Supervised Learning of Textual Entailment Rules

Fabio Massimo Zanzotto, Marco Pennacchiotti, Alessandro Moschitti

Our solution:

• Semi-automatically extracting entailment corpora from wikipedia revision system

• Learning first-order rewrite rules from annotated examples
